

AQUAXYL

Blend of xylitol and xylitylglucoside, restructuring skin barrier. It improves the water reserves, limiting the loss. It acts on flaking, bringing relief to the most delicate skin. It prepares the skin to fight against external aggressions. Visible results on sensitive and couperose skin from the first applications.

BEAUPLEX VH

Multivitamin complex consisting of 5 important vitamins

- Vitamin E : antioxidant
- Vitamin C: antioxidant, fights free radicals
- Vitamin B3: improves the barrier effect of the epidermis, stimulates fibroblasts, reduces dark spots
- Vitamin B5: moisturizing, emollient, soothing
- Vitamin B6: antioxidant

GLYACID ECO

It is a biotechnological product whose reduced molecular size favors intradermal penetration, constituting a precious source of raw material for the formation of medium molecular weight hyaluronic acid, particularly suitable for water retention in the connective tissue and responsible for deep hydration.

This powerful ingredient induces at the same time an increase in the permeability of the connective tissue thus favoring the drainage of interstitial hydrolipidic fluids, the penetration of the active ingredients that favor the decrease of the inflammatory state and the recovery of vascular circulation.

It performs the function of carrier, helping the conveyance of all the other precious active ingredients contained in this extraordinary and functional cream.

Is composed by:

- Body-Fit: visibly reduces cellulite, improving drainage and water distribution in the tissues, favoring the firming of the tissues.
- Actigym: a personal trainer at home! Induces the release of adiponectin from adipose tissues by improving metabolism of types 1: muscle fibers and mitochondrial activity

- Escin: draining activity
- Caffeine : lipolytic activity
- Emollients: avocado, rice, shea butter, Vitamin E

MYRAMAZE

Mirothamnus flabellifolia is a small, super-resistant and tenacious shrub that grows in the deserts of South Africa. His ability to create a real survival strategy allows him to live in this hostile environment, characterized by long periods of drought. However, it is also known as "the resurrection plant": as soon as the first drops of water reach it, its regenerative process begins. Myramaze is extracted from this shrub, a real oasis for "dry and dry" skins, a precious ingredient for the high-level cosmetic industry. A single application of Myramaze invigorates the skin for over 48 hours, while its regular use regenerates and strengthens the skin, thanks to its great supply of hydration and its impassable barrier against the oxidation of most of the linoleic fatty acids.

NICOMENT

It is a naturally derived product that combines the stimulating properties of nicotinic acid with the refreshing ones of natural menthol. In addition to its high affinity with the skin, which allows rapid and effective absorption, Nicoment performs an effective skin micro-massage associated with a pleasant sense of stimulating well-being generated by the simultaneous "cold-hot" effect. This makes it the ideal ingredient in cellulite treatment products.

It performs an "indirect" purifying action in the treatment of cellulite, contributing to the elimination, through increased blood circulation, of any toxins present and accumulated in the cellulite areas affected by excessive stasis of interstitial liquids. In addition to the action of "skin micro-massage", it also exerts a carrier and bio-activating action, thus promoting the deep penetration of the active ingredients contained in our cream.

REFORCYL

It is a balanced combination of natural and biotechnological substances that counteract the perturbations of the skin barrier and strengthen the antioxidant defense system.

- Gynostemma Pentaphyllum extract: also known in ancient medical texts as "the tree of immortality". It is a plant that grows in the Far East, is used to strengthen immune barriers and stimulate the neosynthesis of liquids, improving the integrity of the skin barrier.
- Cistus Incanus Extract: plant with pink flowers, also known as Cistus and grows in areas of the Mediterranean basin. It mainly uses its aqueous extract, very rich in polyphenols with great antioxidant and anti-inflammatory properties.

- L-Glutamine: a powerful amino acid that acts on tissue reconstruction and aging. Provides all the energy needed to stimulate metabolic processes.

SLIMEXIR

Active ingredient with slimming and anti-cellulite action. Its active ingredients stimulate lipolysis causing the breakdown and decomposition of adipose accumulations.

- Scientifically proven effects
- Prevents the formation of new adipocytes
- Reduces the accumulation of lipids
- It stimulates the breakdown of existing fat
- Counteracts the orange peel
- Promotes a significant reduction in the volume of the abdomen

Is composed by:

- X-Melt: an extraordinary blend of 4 different methylxanthines, which are derived from coffee beans, kola nut, tea leaves and Paraguayan guarana. It inhibits the formation of adipocytes, reduces the accumulation of fat (lipogenesis) and stimulates the decomposition of lipids (lipolysis)
- Artichoke extract: contains high levels of caffeoylquinic acids which stimulate the decomposition of lipids providing an anti-edematous effect. It acts on the circulation and stimulates drainage. Thanks to its anti-edematous and diuretic effect, it helps to reduce tissue swelling caused by water retention.
- Levan: a polysaccharide composed of fructose molecules. Activates decomposition and thanks to its high molecular weight creates a tonic film on the skin. It is able to provide deep hydration to the tissues, almost comparable to hyaluronic acid, and relieves skin redness.
